Jeffrey Tumlin's "Sustainable Transportation Planning" is a very serviceable introduction to the area

of transportation planning. He places this within the broader context of overall urban planning. The book's back cover states this work uses "clear, nontechnical language" which is mostly true. Jargon, especially abbreviations, are necessary evils for works like this. Thus, the book does gently introduce the reader to new terminology and establishes a vocabulary for future study in this field. Overall, the vocabulary is directed towards people who may never have studied urban planning or transportation at all. Most of the listed sources are online, usually federal government based (e.g., the Environmental Protection Agency) and appear to be spot on. Additionally, the endnotes section, divided up by chapter, is also an excellent resource for further research. I take one star off (out of 5) primarily for the disappointing "Case Studies" sprinkled throughout the work. These are usually just single paragraphs stating little useful information. "Case Study: San Diego Trolley" (p.
