Bypassing Bypass Surgery: Chelation Therapy: A Non-surgical Treatment For Reversing Arteriosclerosis, Improving Blocked Circulation, And Slowing The Aging Process

Synopsis

More than one million Americans undergo heart bypass surgery and balloon angioplasty every year at a cost of fifty billion dollars. But there is a simple, nonsurgical method to open clogged arteries that is administered in the doctor's office. Chelation therapy works in all the arteries at once, it's much safer, and is much less expensive.

Book Information

Paperback: 416 pages

Publisher: Hampton Roads Publishing; 1 edition (August 1, 2001)

Language: English

ISBN-10: 1571742972

ISBN-13: 978-1571742971

Product Dimensions: 5.5 x 1.1 x 8.6 inches

Shipping Weight: 1.1 pounds (View shipping rates and policies)

Average Customer Review: 4.3 out of 5 stars [See all reviews](#) (46 customer reviews)

Best Sellers Rank: #216,943 in Books (See Top 100 in Books) #6 in [Books > Health, Fitness & Dieting > Alternative Medicine > Chelation](#) #147 in [Books > Health, Fitness & Dieting > Diseases & Physical Ailments > Heart Disease](#) #152 in [Books > Textbooks > Medicine & Health Sciences > Medicine > Basic Sciences > Pharmacology](#)

Customer Reviews

In 1974 as a senior at Kansas State College, finishing up my degree in Biology/Chemistry I chose for my senior research project "Cadmium poisoning in Blue Green Algae". In this study I learned, first hand, the value EDTA can have on living systems. Plant mitochondria and animal mitochondria operate in exactly the same way, producing energy for living systems. It happens that in the most fundamental "engine" of our bodies, the Krebs Cycle, living systems, both plant and animal, are vulnerable to heavy metal poisoning. Enzymes are the tools living systems use to extract energy from the nutrients we take in. I do not know the exact number but somewhere in the neighborhood of 25 percent (give or take 10) of these enzymes are "sulf-hydryl" enzymes. That is, they are ordinary enzymes that have a sulfur and hydrogen attached. This is the problem. Heavy metals are strongly attracted to these sulf-hydryl sites and after attaching they render the enzyme unusable by our systems. What are heavy metals? Lead, we all know lead can kill us, mercury and arsenic, the same. But the list also includes aluminum, cadmium and other metals that we do not normally consider toxic. So - what's the big deal? First, heavy metals in our systems are like "Hotel California"

they check in ok but don't check out. They stay in our cells for a very very long time. Thus we are accumulating them throughout the course of our lives. Second the more heavy metals we have in our system the less efficient our energy manufacturing facilities are. It is exactly analogous to pulling two spark plug wires off the engine of your car. It will not have the energy it needs to perform.
